Rvolution

NAS Pure 4K UHD Audio and Video, Fully Dematerialized

Effortlessly preserve your video disc library and experience it throughout your home with seamless multiroom streaming.

The Rvolution NAS allows you to create a fully digitized video library from your DVD, Blu-ray, and 4K UHD Blu-ray discs. Your content is securely backed up and stored on hard drives—without compression, and with absolutely no loss in quality.

As your video library grows, you can expand system capacity by adding additional hard drives. The Rvolution NAS offers storage for up to 2,000 4K UHD Blu-rays, 3,200 Blu-rays, or 19,200 DVDs. Multiple Rvolution NAS units can be grouped into a single system, allowing you to store thousands of movies, series, concerts, as well as personal photos and music.

Our advanced video dematerialization system can identify over 1.5 million titles across DVD, Blu-ray, and 4K UHD Blu-ray formats—regardless of region or zone.

Once your discs are stored on the Rvolution NAS, they're instantly accessible from any Rvolution player in your home.

The Rvolution NAS is highly scalable and continues to operate even in the event of a drive failure, with no data loss thanks to RAID-5 technology.

Designed for long-term reliability, it ensures your media collection remains **safe, accessible, and future-proof.**

An Exclusive Media Center

Streamlined, fast, and contemporary.

R_volution media players come equipped with **R_video**—the most advanced Media Center on the market, featuring a sleek, intuitive interface for browsing your movies, series, and concerts with speed and simplicity.

R_video scans your video files stored on a locally connected drive or NAS over your home network, then automatically downloads posters, animated backgrounds, soundtracks, format banners (DVD, Blu-ray, or 4K Ultra HD), cast details, and metadata.

Saga films are grouped automatically. All that's left is to sit back in your home theater and enjoy your collection. Browse by genre, sort by rating, duration, or release date, read summaries, and watch trailers. Then press PLAY to enjoy your movie, concert, or series in up to 8K resolution with HDR10, HDR10+, Dolby Vision, Dolby Atmos,

Example of a TV Series Display in R_video

The **R_video** interface supports both **Widescreen** 2.39:1 and 16:9 formats. Each movie and series entry includes detailed information such as release date, duration, age rating, user score, audio tracks, subtitles, cast, director, and technical data like resolution, audio codecs, viewing status, and HDR format.

Users can create favorite scenes and explore those shared by the community. For TV series, episode navigation is intuitive, with quick access to the last unseen or currently playing episode. After finishing an episode, the next one is automatically suggested within 10 seconds.

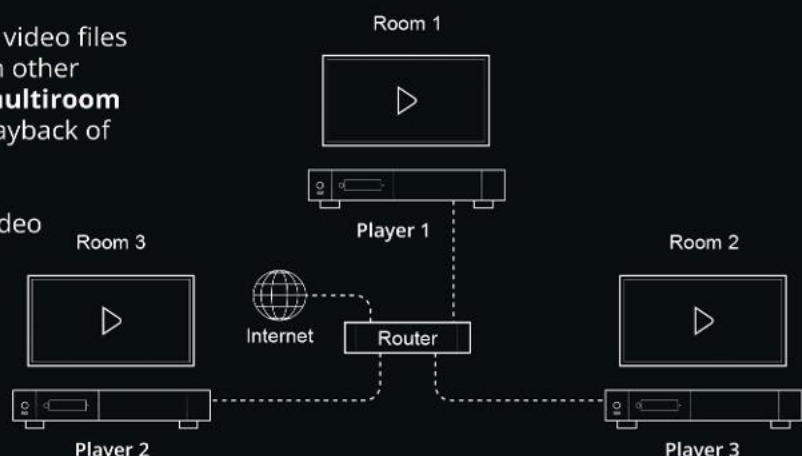

Whole-Home Streaming

Enjoy seamless video playback across every room.

With the **R_share** feature, you can share video files stored on internal or external drives with other R_volution players. This enables a true **multiroom video system**, allowing simultaneous playback of multiple files across different rooms.

R_sync automatically synchronizes your video library with all R_players and computers in your home, including seamless resume playback from one room to another.

If you're using a NAS, you can stream as many videos simultaneously as your NAS performance allows.

R.video Designed for both Mac and PC users

Browse, organize, and edit your collection from your computer.

In addition to being used on your Rvolution player connected to a TV or projector, the R_video app is also available for Mac and PC. It allows you to manage your collection more easily using a keyboard and mouse. Thanks to R_sync, your library of movies, series, and concerts is automatically synchronized across all R_players in your home and with your Mac and PC computers in multiroom mode.

For users with Mac or PC-based home theater systems (HTPC) who don't own an Rvolution player, a standalone R_video subscription is available. You can also launch video playback directly from R_video on your computer using your preferred media player.
